

Sticky Note Number Match

Category: Math

With a sheet of paper taped to the wall, some sticky notes and a marker, you can set up this movement-oriented math activity to help kids understand the meaning of numeric values. Instead of memorizing lists of numbers, this “game” lets kids hunt for sticky note numbers and stick them on the wall over the grouping of dots (or stars or banana stickers, if you like) that matches the number.

The setup for this activity could not be simpler, and anyone with tape and paper can make it happen! If your kids are still working on the concept—numbers 1-5 can be an easy place to start.
